

Editing the firewall in the Cloud Panel:

Go to your servers and cloud section of your account:

Click on network and firewall policies:

Click on the firewall you want to edit:

The screenshot shows a top navigation bar with a blue circle icon and the text "Linux". To the right, there is a green circle icon and the text "TCP: 22, 80, 443, 3389". Below this is a table titled "Configuration" with a header row: "Action", "Allowed IP", "Protocol", "Port(s)", and "Description". The table contains five rows of data, each with an "Edit" and "Delete" button in the last column. The last row is highlighted with a red box around the "Port(s)" field, which is currently empty. Below the table is a button labeled "+ Add Predefined Values".

Scroll down and you will see a table, here you can add a port and save it:

Configuration

Incoming

Action	Allowed IP	Protocol	Port(s)	Description	Actions
Allow	All	TCP	22		
Allow	All	TCP	80		
Allow	All	TCP	443		
Allow	All	TCP	3389		
Allow	all	TCP	<input type="text" value=""/>		

+ Add Predefined Values

Wait for it to finish configuration:

The screenshot shows a top navigation bar with a blue circle icon and the text "Linux". To the right, there is a green circle icon and the text "TCP: 21, 22, 80, 443, 3389". Below this is a progress bar with a rainbow arc and the text "1%".

You are now finished.
